## Solving Problems with Unit Rates

7. Cecilia and Diego get gas at the same station. Cecilia spends \$47.08 on 11 gallons. If Diego spends \$59.92, how many gallons will he get?

answer: \_\_\_\_\_

8. Troy can fit 114 books on 3 shelves. If he has 266 similar-sized books, how many similar-sized shelves would he need?

answer: \_\_\_\_\_

9. Convention organizers arranged 520 seats into 20 equal rows. How many seats were

answer: \_\_\_\_\_

11. A pack of 12 pairs of socks costs \$30. Assuming there is no discount for the pack, how much should 5 pairs of socks cost?

answer: \_\_\_\_\_

12. Perry's Painters painted 495 square feet in 6 hours and 36 minutes. At that speed, how much could they paint in half an hour? (*Hint: 60 minutes in an hour.*)

answer: \_\_\_\_\_

# ANSWER KEY

## Solving Problems with Unit Rates

Find the unit rate to answer the question. Label your answers.

1. A store receives a shipment of 2,700 eggs in 150 identical cartons.  
How many eggs are in 40 cartons?

$$2,700 \div 150 = 18$$

how much could they paint in half an hour? (*Hint: 60 minutes in an hour.*)

$$6 \times 60 + 36 = 396$$

$$495 \div 396 = 1.25$$

$$1.25 \times 30 = 37.5$$

answer: 37.5 square feet
